

A close-up photograph of a person's hands holding their right knee, suggesting pain or discomfort. The person is wearing a dark blue t-shirt and a black smartwatch. The background is a blurred outdoor setting with greenery and a path.

# Discouraged by the burden of knee pain?

*A new treatment option is now available for patients not ready for knee replacement*

If you struggle with pain or aching on the inner side of your knee, you may have **osteoarthritis (OA)** - a common condition that causes knee cartilage to “wear away” over time, leading to painful bone-on-bone contact.

Doctors (**Site Name**) are accepting participants for a new clinical research study. The study is for the **MISHA Knee System** - an implantable shock absorber designed to reduce the force going through painful knees, and a less invasive option than knee replacement.

If you participate, you will be treated by a team of specialists and will receive the MISHA Knee System and procedure at no cost.
